### DETAILED ACTION

In light of the TD and arguments filed 12/7/2005, the rejection of record has been dropped and a new rejections follows.

#### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, and 5-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Furukawa (6,569,603) in view of Arias et al (6,933,093).

Furukawa disclose a light-sensitive composition which comprises (A) a polymer having a phenyl group substituted by a vinyl group at a side chain, (B) a photopolymerization initiator and (C) a sensitizer which sensitizes the photo-polymerization initiator, or a light-sensitive composition which comprises (A') a polymer, the above-mentioned (B) and (C), and (D) a monomer having at least two phenyl groups each of which is substituted by a vinyl group in the molecule of the monomer; and a method of forming a relief image which comprises coating the light-sensitive composition as mentioned above on a support, exposing the composition by exposure or scanning exposure and developing the same to form a relief image on the support. The reference discloses in its preferred examples, a monomer meeting the limitations of the instant claim 17 (see column 9). The reference fails to teach the instantly claimed carboxylic compound.

Art Unit: 1752

Arias et al disclose a resin for a printing plate employing a stabilizing acid which is preferably benzoic acid.

Given the teachings of the references, it would have been obvious to one of ordinary skill in the art to prepare the material of Furukawa choosing to include the acid of Arias et al to improve the shelf life with reasonable expectation of achieving a material having high sensitivity.
